

Jan-May 2026 Performance Overview

H1 2026 Summary

£1.9M GPV generated from 1.5K transactions. Premium customers drove 63% of value while 80% settlement failures and 20% fraud exposure created significant operational and financial risk.

1.5K	£1.90M	£750.17	80%	20%	4
Total Transactions	Total Transaction Value	Fee Revenue	Settled Failure Rate	Fraud Rate %	High-Risk Customers
Jan-May 2026	Gross Processing Value(GPV)	Total collected fees	900 failures/1,125 settled	Fraud value vs. Total GPV	Accounts flagged for review

Monthly Business Performance

Transaction Status Breakdown

Business Insights & Recommendations

1. Operational Failure (Highest Priority)
80% settlement failure with only 15% completion — just 2.6p settles per £1 attempted. Prioritize root-cause analysis of payment authorization flows immediately.
2. Revenue Concentration Risk
Premium customers drive 63% of total GPV (£1.20M), creating dangerous single-segment dependency. Scale Standard and Business segments to diversify.
3. Fraud Exposure
£1.19M fraud exposure (20% of GPV) concentrated among 4 high-risk customers. Implement enhanced monitoring and transaction controls immediately.
4. Revenue Leakage
-£0.17 fee variance suggests leakage primarily in transfer transactions. Audit fee-calculation logic to recover lost revenue.
5. Data Quality Alert
1,200 transactions (80% of failures) logged as "Unknown" reason — preventing precise root-cause analysis. Immediate Data Engineering review required

Highest Risk Exposure

- Rajan Mehta (Premium)** holds a **£112K Declined, fraud-flagged Crypto transaction** — representing **9.4% of total fraud value (£1.19M)**, the highest risk-adjusted exposure in the portfolio, combining **high value + fraud flag + Declined status despite passing KYC verification**.
- This pattern suggests either a compromised account or a sophisticated fraud bypass of existing KYC controls.
- Immediately freeze account, audit all associated transactions dating back 90 days, escalate to Senior Risk Officer, and file a SAR with the Compliance team before next business day.

Business Insights & Recommendations

Inverted Risk Taxonomy

- Current risk ratings are ineffective; categories labeled **"High-risk"** (e.g., **Crypto**) show lower fraud than **"Low-risk"** categories (e.g., **Fuel, Gambling**). Furthermore, **100% of fraud originates from KYC-verified accounts**.
- Recalibrate the risk-scoring model. Shift focus from "High-risk" merchant tags to monitoring **"Fuel & Gambling"** transactions, and enhance due diligence on **existing KYC-verified accounts**.

High-Exposure Concentration

- A single customer accounts for **59% of total fraud value (£1.12M)**, while **98%** of total fraud exposure is geographically concentrated in **London**.
- Terminate the high-exposure account immediately and implement stricter transaction velocity limits for all **London-based Premium accounts**.

Peak Fraud Window

- Fraud peaks **Monday & Friday mornings (06:00–08:00)** and Friday afternoons **(14:00–15:00)**
- Enable step-up authentication during these windows.

Business Insights & Recommendations

High-Risk Fraud Exposure Report

- Rajan Mehta (Premium) holds £112K in a Declined, fraud-flagged Crypto transaction -the single highest risk-adjusted exposure in the portfolio.
- Immediately initiate an urgent manual audit & a/c freeze.

High-Risk Customer Concentration

- High-risk customers represent 30% of users but hold 63.33% of total portfolio value, with "Premium" accounts driving the majority of this fraud exposure
- Implement mandatory step-up authentication for all Premium-segment transactions exceeding £10,000 to mitigate potential fraud exposure.

KYC & Failure Correlation

- All fraud comes from "Verified" accounts. Their 69% failure rate versus 25% for unverified suggests flawed risk logic, causing false positives for verified users while leaving £28.12K in non-KYC exposure unmonitored.
- Audit verification and fraud-scoring logic to resolve false positives and secure gaps. Prioritize re-verifying the "Starter" segment to mitigate the £28.12K

Domestic	£14,63,724	19%	£587.28

Systemic Failure Rate by Month

Data Integrity Alert (Systemic)

- Insight:** Current system logs report a **100% failure rate** across device types, and **"Unknown" accounting for 900 failed transactions** is the leading cause of transaction failure.
- Recommendation:** Immediate investigation by the Data Engineering team is required to address potential data ingestion gaps, as these **"Unknown"** errors are currently masking true operational performance and preventing analysis of **80% of total failure volume**.

Regional Performance & Risk Exposure

Region	Total Value	Fraud Rate %	Avg Txn Value
London	£11,68,846.18	60%	3,116.92
Midlands	£45,690.58	33%	203.07
East of England	£4,232.73		56.44
North East	£37,484.85		499.80
North West	£7,117.89		47.45
Scotland	£5,519.28		36.80
South East	£5,59,003.80		2,484.46
South West	£1,120.62		14.94
Wales	£4,501.82		60.02
Yorkshire	£63,750.00		850.00

Business Insights & Recommendations

High-Risk Customer Concentration

- High-risk customers represent **30% of users** but hold **63.33% of total portfolio value**, with **"Premium"** accounts driving the majority of this fraud exposure
- Implement mandatory step-up authentication for all Premium-segment transactions exceeding **£10,000** to mitigate potential fraud exposure.

Systemic Performance Failure

- Only 15% of transactions** are successfully completed; for every **£1 attempted, only 2.6p settles**.
- Audit the transaction processing pipeline immediately. The high decline/reversal rates (**60% combined**) suggest a critical failure in the automated payment rails.

Revenue Leakage

- Fee leakage stands at **£0.17M (~2.3% of potential gross revenue)**, largely driven by unauthorized waivers in the Premium segment.
- Initiate a comprehensive audit of all **Premium fee waivers** and standardize fee application logic across all segments.

ATM & Channel Failure Alert

- ATM Network shows 63% failure rate — investigate reversal concentration on ATM channel specifically.
